EcoGreen Homes

Increased consumer awareness of environmental issues has driven demand for green buildings, creating a new market segment within the housing industry.

Presently this trend has been available only for higher-priced homes. However, using the efficiencies of the Green Home model construction, EcoGreen Homes are able to make green features available without a high price-tag.

Use of natural green building products, along with state-of-the-art intelligent, green technology, work together to keep your home healthy and ultra-modern.

EcoGreen Homes recognizes that different customers have varying needs and values design versatility; for these reasons careful planning goes into a green construction, and by using in-house Intelligent Green Home Technology (IGH - Patent Pending) we are able to offer a broad spectrum of EcoGreen Home options.

We also have access to New Zealand Energy Forum (NZEF) research. NZEF has been undertaking research on green homes and green building technologies since 2006.

Additional Information

EcoGreen Homes redefines the building industry, offering homes that are not only affordable, but also offer a healthier indoor environment and a lower environmental impact when compared to a traditional home. Specifically, EcoGreen Homes reduce natural resource use and construction waste, increase energy and water efficiency, and improve indoor air
